## electronic Customer Verification

### Perform Secure Electronic Identification and eKYC through WiseBOS eCV

Powered by **Regula** technology, the leader in government-issued ID documents, **WiseBOS eCV** is a powerful AML tool allowing you to build a **valid customer profile**, by performing **real-time ID & Face verification** in seconds and thus effectively reducing fraud exposure and eliminating the financial risk of your company.

**WiseBOS eCV** enhances your client onboarding journey by providing them with a seamless digital experience, resulting in customer satisfaction & loyalty.

## How does it work?

**STEP 01** Customers upload or take a photo of their ID document, using their computer's or smartphones' built-in camera.

**STEP 02** The ID document is checked against security features with the use of AI for real time electronic authentication, by providing automatic document type detection and accurate MRZ reading and visual zone verification.

**STEP 03** Data is automatically and accurately extracted from the ID document with the use of OCR technology.

**STEP 04** Customers are then asked to take a selfie by following simple instructions, to prove they are the same person shown on the ID document photo. Our system's face-based biometrics and advanced liveness detection, ensures that the person taking the photo is real and that is the same person appearing on the ID document photo.

## Key facts
